1. FEATURES

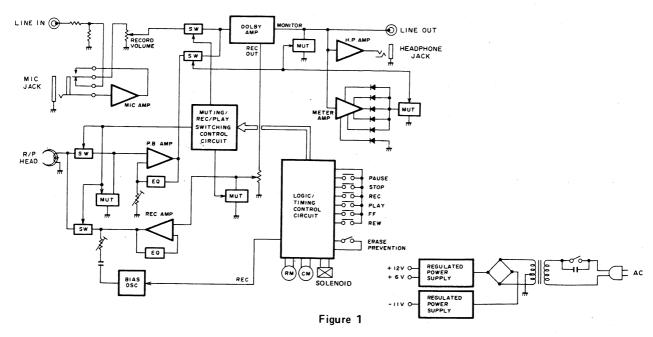

- IC logic feather-touch switches for soft fingertip operations.
- Remote control jacks for remote control operation from the comfort of a lounge chair (when optional remote control unit connected).
- Dolby NR for elimination of irritating "tape hiss".
- 3-position tape selector including metal tape position.
- Capacity for unattended recording and morning alarm playback.
- Soft eject mechanism for smooth ejection of tapes.
- Extra large LED digital peak meter.
- Sliding type recording volume control for simple settings.
- Main tape mode control buttons (PLAY, REC and PAUSE) designed to light up when pressed, thereby simplifying operating procedures.
- Performance further improved by dual-motor system for independent capstan and reel drive.

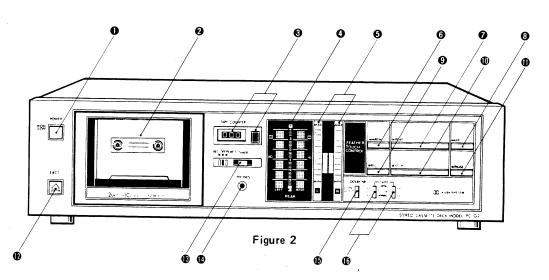

DOLBY SYSTEM

* Noise Reduction System is manufactured under license from Dolby Laboratories.

"DOLBY" and the Double-D symbol are Trademarks of Dolby Laboratories Inc.

2. BLOCK DIAGRAM

- **1** POWER Switch
- **2** Cassette Compartment Door
- **13** TAPE COUNTER and Reset Button
- 4 Peak Level Meters
- 6 Record Level Adjustment Control

Adjust the recording level for line and mic inputs with this control (<R> for right channel, <L> for left channel).

⑥ [◀ REW] Rewind Button

- **⊘** [▶PLAY] Play Button
- **③** [▶▶FF] Fast Forward Button
- **⑨** [●REC] Record Button

Recording mode is started by pressing this button. Note, however, that the deck cannot be put into recording mode if there is no tape loaded in the cassette compartment, or if the cassette tape erasure prevention tabs have been broken off.

3. OPERATING CONTROLS

- **(I)** [■STOP] Stop Button
- [IIPAUSE] Pause Button
- [≜EJECT] Eject Button
- (B) [TIMER] Timer Standby Switch

By using an optional audio timer unit, unattended recording and morning alarm playback are possible.

(PHONES) Headphones Jack

Plug in a pair of headphones for quiet private listening.

⑤ DOLBY* NR Switch

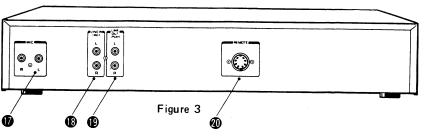

Push this switch for Dolby NR recording and for playback of Dolby encoded tapes. Tape hiss in the mid and high frequency regions is suppressed.

* Noise reduction system manufactured under license from Dolby Laboratories. "Dolby" and the double-D symbol are trademarks of Dolby Laboratories.

TAPE Selector Switch

Switch to the position corresponding to the type of tape being used.

	[TAPE] Switch
	Left	Right
Metal Tape		
Chrome Position Tape		П
Normal Tape		

Microphone Jacks

For live microphone recording, plug in the microphones to these rear panel jacks (L-left channel, B-right channel)

(B) LINE IN Recording Terminals

Connect to the REC OUT terminals on the rear panel of your stereo amplifier.

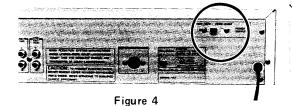

LINE OUT Playback Terminals

Connect to the PLAY IN terminals on the rear panel of your stereo amplifier.

® REMOTE CONTROL Connector

The RM-20S remote control unit may be connected here for remote control purposes.

TD MODEL

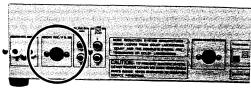

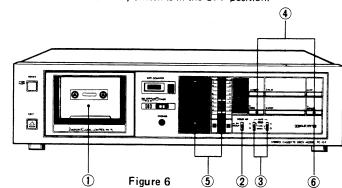

Figure 5

Recording

■ Recording from Phonograph Records or Tuner

Note: Make sure that the TIMER standby switch is in the OFF position.

- Place a cassette tape in the cassette compartment.
- 2 Select the DOLBY NR switch.
- 3 Set the TAPE selector switch to the position corresponding to the type of tape.
- ♠ After first pressing the pause button [II PAUSE], press the record button [♠ REC].
- (5) Use the peak level meters and the record level adjustment control to adjust the input level to the best recording level.
- **(6)** Press the [**II** PAUSE] button a second time to commence recording.

Stereo Microphone Recording (Live Recording)

Plug a pair of microphones into the microphone jacks in the rear panel, and proceed according to the recording method described above.

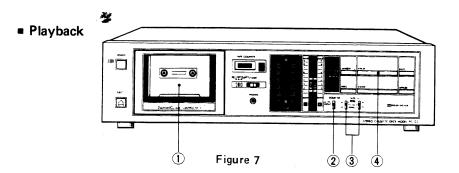

4. OPERATING INSTRUCTIONS

■ Recording Level Adjustment

Generally, the type of tape used and the recording level setting will effect the recording frequency response. For example, the frequency response of metal tapes (particularly in middle and high frequency regions) is considerably better than normal tapes at the same level setting.

Furthermore, the recording/playback frequency response is also improved by setting the recording level at somewhat lower levels for the same tape.

When the tape selector is switched to the chrome position, optimum recording level will be indicated by the top yellow indicator flashing on now and again during the recording. When switched to the normal or metal tape positions, the optimum levels will be a little lower and a little higher respectively. It is recommended, however, that some test recording be done first to find the most suitable recording levels.

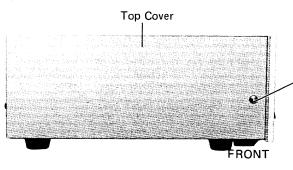

- ① Place the desired cassette tape in the cassette compartment.
- 2 Select the DOLBY NR switch.
- ③ Set the TAPE selector switch to the position which corresponds to the type of tape.
- ◆ Press the play button [►PLAY]

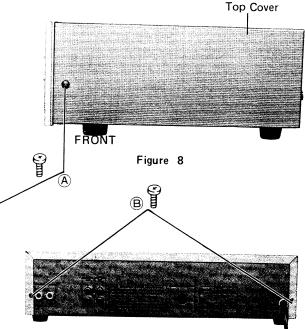

Note: Check that the TIMER standby switch is in the OFF position.

5.DISASSEMBLY INSTRUCTIONS

TOP COVER REMOVAL

- 1. Remove two screws $\textcircled{A}(3\phi \times 12\text{mm})$ from each side of the top cover. (See Figure 8).
- 2. Remove two screws B (3 ϕ x 8mm) from the rear side. (See Figure 9).
- 3. Lifting the top cover upward, pull it backwards and the top cover can be removed out.

CASSETTE COVER REMOVAL

- 1. Push the eject button to open the cassette cover.
- 2. Press the top and bottom of cassette cover with fingers, and take it upward in the direction of the arrow © . (See Figure 10).

Then the cassette cover can be removed from the unit.

FRONT PANEL ASSEMBLY REMOVAL

- 1. Remove the top cover.
- 2. Remove two screws (D) ($3\phi \times 6$ mm) from both sides of the unit. (See Figure 11)
- 3. Remove three screws E (3 ϕ x 8mm) from the bottom side of the unit. (See Figure 12).
- 4. The front panel assembly can be removed from the unit.

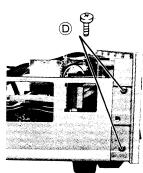

Figure 11

BOTTOM PLATE REMOVAL

1. Remove seven screws (F) (3 ϕ x8mm) from the bottom side. (See Figure 12)

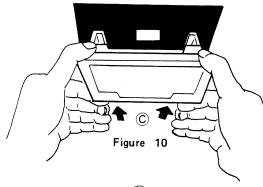

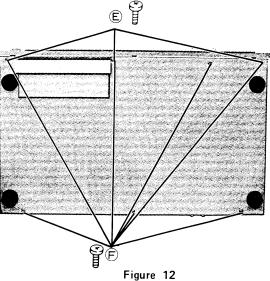

Figure 9

VOLUME AND PEAK METER P.C. BOARD REMOVAL

1. Remove two screws G (3 ϕ x 25mm) from the front panel assembly. (See Figure 13).

TIMER SWITCH P.C. BOARD AND HEADPHONE P.C. BOARD REMOVAL

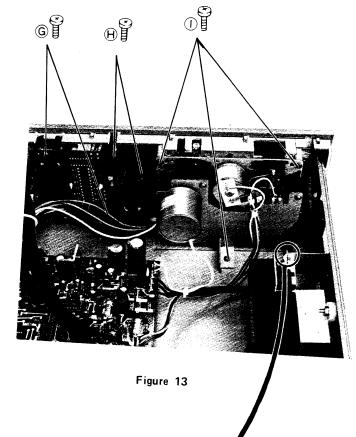

- Remove the volume P.C. Board and the peak meter P.C. Board as described above.
- 2. Remove two screws \bigoplus (2.6 ϕ x 8mm) and the timer switch P.C. Board and the headphone P.C. Board can be removed together with the LED holder. Take care of reassembly. (See Figure 13)

MECHANISM ASSEMBLY REMOVAL

- 1. Push the eject button to open the cassette holder.
- 2. Remove three screws (1) (3 ϕ x8mm) and (3 ϕ x6mm) from the front panel assembly. (See Figure 13).
- 3. Then the mechanism assembly can be removed from the front panel assembly.

CAUTION: The counter belt is taken off when the mechanism assembly is removed.

When reassembly, string the counter belt between the take-up reel and the counter pulley.

CAUTION: Before disassembling the mechanism assembly, take off the connecting part of power switch and push rod (Power) in the directions of arrows and lift up the push rod to remove it off.

6. TECHNICAL POINTS

TC9143P IC Logic Control

Outline

The two motor electronic control system with feather touch switching basically depends on the C.MOS. IC, TA9143P.

- 1. Input keys permit a non-lock system and change the level to "H" in a moment to gain a desired mode.
- 2. Direct change between all operational modes is possible and the mode passes through the stop mode if necessary.
- 3. Countermeasures have been taken for operational errors such as push of plural input keys at a time.
- 4. When the power is on, the mode is set up to stop.
- 5. Input terminals of TC9143P are organized as Input/Output.

Maximum Rating

ltem ·	Symbol	Rating	Unit

16	VDD	Source terminal	_

■ Operational Timing

The operational timing inside is set up as it follows with frequency oscillation as fosc.

fosc ≒ 120 Hz

1. Chattering Prevention Timing

2. Muting Timing

$$T_1 = \frac{1}{7} = \frac{8}{\text{fosc}} = \frac{1}{7} 70 \text{ msec.}$$

3. Direct Change/Auto Stop Timing

$$T_2 \stackrel{1}{=} \frac{32}{\text{fosc}} \stackrel{1}{=} 260 \text{ msec.}$$

4. Auto-Stop Detecting Timing

$$T_3 = \frac{64}{\text{fosc}} = \frac{1}{7} 500 \text{ msec.}$$

■Operational Timing toward Key Input of Each Output Terminal

(a) Operation of Muting Timer (0-MUT Terminal)

When the mode change is conveyed from the key input, the muting timer cuts off the output from the audio amplifier for a definite duration of time and erases pop noise that generates when changing the mode.

This time length lasts for about 70 milli-seconds for operation from the stop mode and about 330 milli-seconds for direct change operation. (However, since it takes 0.4 second for auto-stop, it takes 0.1 second for muting.)

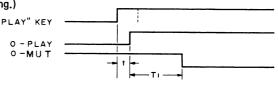

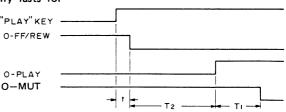

Figure 17

(b) Mode Change from except Stop Mode (Direct Change)

When changing the mode directly, the stop mode automatically lasts for

about 260 milli-seconds in order to protect the tape.

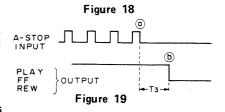

(c) Auto-Stop Operation

When the detector signal of reel stand revolution finishes at point (a), the ouput of PLAY/FF/REW changes to the stop mode at point (b) after T_3 of 500 msec.

(d) Initializing with Power On

With the power on, the level of STOP input terminal of IC TC9143P is changed to "L" during T of the charging constant by R603 and C602, and maintains the stop mode when the circuit becomes stable, the terminal accepts the other input key. With the power off, the terminal quickly discharges through D601 and the mode changes to stop.

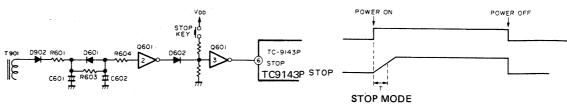

Figure 20

■ Deck Mechanism and Logic Control System

The head chassis of the deck moves with the inertia of the flywheel. The relation of mechanism with the logic control is as follows.

- (1) The key input activates the logic IC to gain the output.
- (2) The solenoid operates the cam to activate the inertia of the flywheel which is conveyed to the head chassis and consequently the head comes into contact with the tape. It takes about 300 msec.
- (3) After 350 msec., the reel motor revolves to take up the tape.
- (4) After 500 msec., the muting is taken off to start recording or playing back.

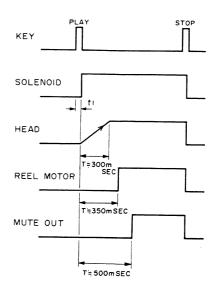

Figure 21

7. EXPLANATION OF LOGIC CIRUIT OPERATION

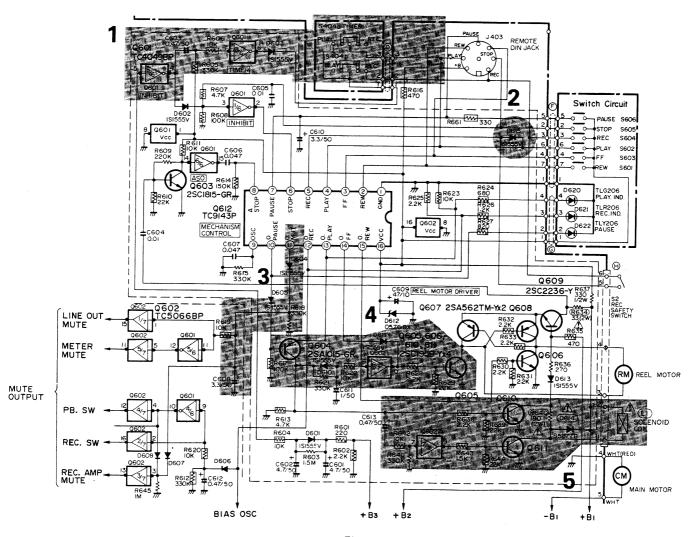

Figure 22

■ Deck Mechanism and Logic Control System

The head chassis of the deck moves with the inertia of the flywheel. The relation of mechanism with the logic control is as follows.

- (1) The key input activates the logic IC to gain the output.
- (2) The solenoid operates the cam to activate the inertia of the flywheel which is conveyed to the head chassis and consequently the head comes into contact with the tape. It takes about 300 msec.
- (3) After 350 msec., the reel motor revolves to take up the tape.
- (4) After 500 msec., the muting is taken off to start recording or playing back.

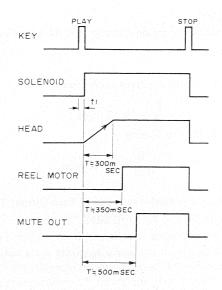

Figure 21

7. EXPLANATION OF LOGIC CIRUIT OPERATION

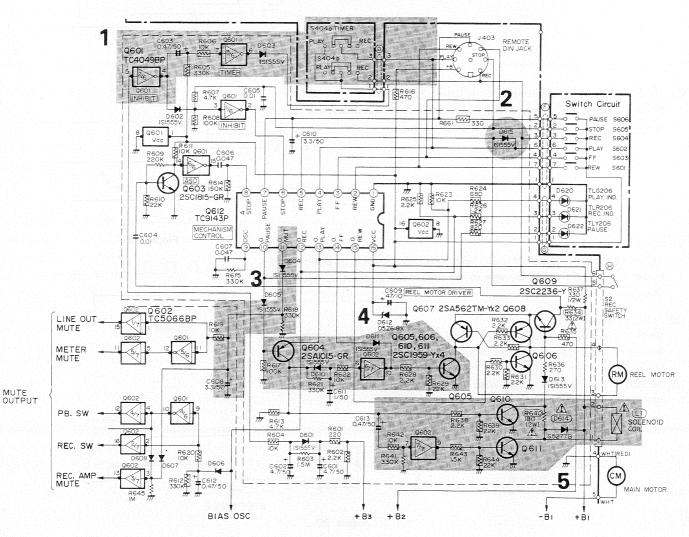

Figure 22

1. After the power is turned on, the electrical level at point B is delayed by time constant of R603 and C602. After T seconds when the level reaches the threshold electrical level of inverter Q601-2, the output C is gained, differentiated at C603, and conveys the order to PLAY or REC/PLAY of logic IC through inverter Q601-1. Delay time T is set up to about four seconds until the circuit of the set becomes stable.

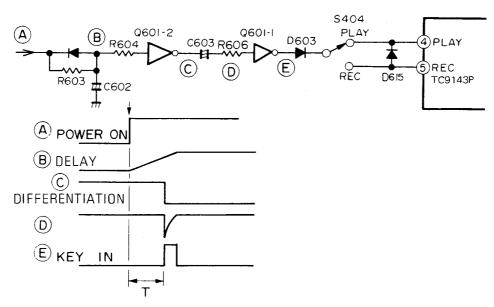

Figure 23

2. When operating the record key, the diode conveys the order to REC and PLAY simultaneously.

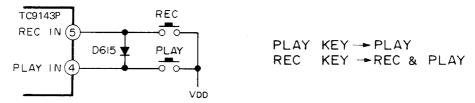

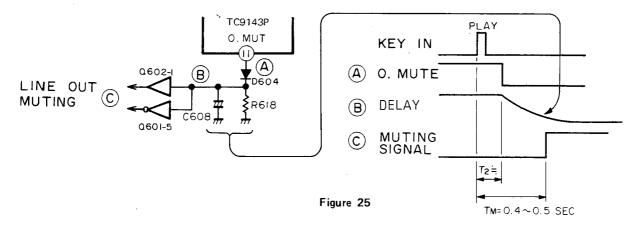

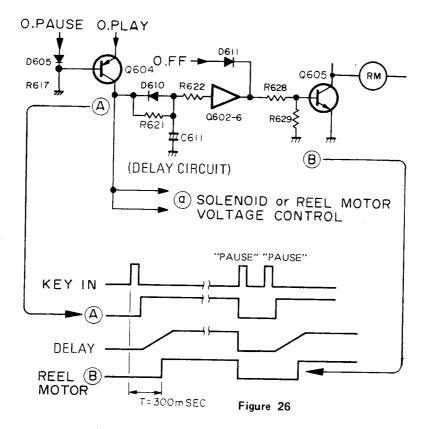

Figure 24

3. When the tape starts to run stably after key input is given from PLAY and REC, the muting signal gains recording and playback signal.

At T_2 (about 260 milli-seconds) after pushing in the key, O-MUTE terminal of IC logic changes "L" from "H". The muting control signal of about 0.4 to 0.5 second is gained by time constant of R618 and C608.

4. When pushing in the play key, O-PLAY output (A) of IC logic is gained. This signal operates the solenoid to contact the tape and the head with inertia of the flywheel. After completing this, the reel motor revolves to take up the tape. Delay time for this is about 0.3 second.

5. The solenoid drive restricts the current after the solenoid is completely pulled for electricity saving and firing protection. The drive signal of the solenoid is divided into Q610 and 611. At the beginning of the pull, the signal which was differentiated at C613 is given to Q611 and the large current is allowed to be flown. After the pull, R640 in series restricts the current to Q610.

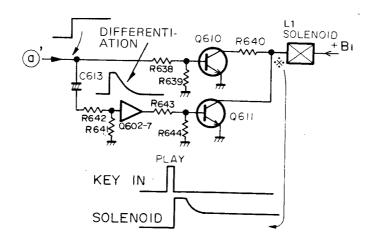

Figure 27

8. TECHNICAL ADJUSTMENTS

Replacement & Adjustment of Solenoid

1

- (a) Take off the solder from the solenoid terminal.
- (b) remove two screws (BID 2.6 x 4) holding the solenoid.
 - **CAUTION:** The tips of screws appear by shifting the lock slider (D) lightly to the left (toward outside) when removing the screws.
 - These screws can be removed with a clock screwdriver or thin driver. If such drivers are unavailable, remove the eject lever and lock slider (D).
- (c) Replace the solenoid to new one.

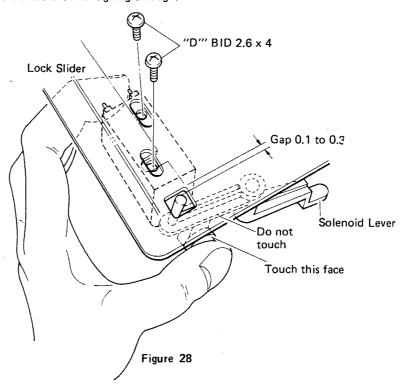

CAUTION: When reassembling, use the specified screws. Longer screws touch the coils in the solenoid and as a result, it brings a rare shorting of them. It may happen to cause not only the solenoid disorder but also a fire and a burning because of overheat of ground spring.

(d) Adjustment of Installation Position

The solenoid assembly can be moved a little forward or backward by holding the tip of solenoid pin and the rear side of it in current penetrating state.

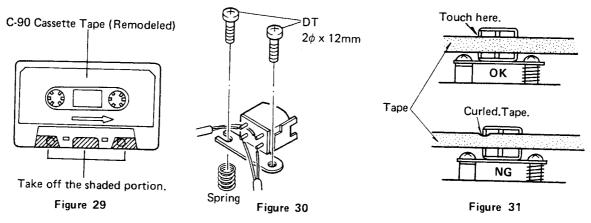

In this state, set the clearance 0.1 to 0.3mm between the 3ϕ tip of solenoid lever and the square hole of mechansim chassis as shown in Figure 28.

- If the fingers do not touch the tip of the solenoid pin but the solenoid lever, the exact adjustment cannot be done because the state becomes like that when the lever is more moved than when the electric is going through the solenoid.
- If there is no space described above, the solenoid cannot be fully pulled when the electric is going through, does not maintain the play mode when changing from the stop mode, and the head slider goes back easily.
- (e) Confirm that the operation of the solenoid lever and the head slider is normal after repeating to change the modes from stop to play with the electric current going through.

Replacement & Adjustment of R/P Combination Head

- (a) Disconnect four head lead wires (single cored shield wire) and remove two head installation screws (BID $2\phi \times 5$ mm/DT BID $2\phi \times 12$ mm).
- (b) Replace the R/P head.
- (c) Reassemble the head installation screws and the head lead wires.
- (d) Confirm the head height as follows. Set the Head azimuth adjustment screws so that the head becomes horizontal by measuring with the eyes and confirm that the mirror cassette (MC-09C) or C-90 cassette (cut off the shaded portions to remodel as shown in Figure 29) is not curled on play mode.

This supplement sheet contains the following contents.

- (1) The transistors, Q409 and Q410 have been changed into FETs during production.
- (2) Only for TD, AY versions, PC-G2T (Toshiba brand) will be released as a new model. Those will employ FETs for Q409 and Q410 from the first production.
- (3) Modifications applied during production are listed.

 Please refer to the original SERVICE DATA, FILE No. 100 150 for other information.

16.PARTS LIST

CAUTION:
The \triangle mark, the symbol No. circled with rectangle in the schematic diagram and the shaded area in the parts list designate components which have special characteristics important for safety and should be replace only with types identical to those in the original circuit or specified in the parts list.

Symbol No.	Part No.	Description	1	Symbol No.	Part No.	Description
IC	'S, TRANS	ISTORS & DIODES	1	D601, 602		Diode, 1S1555V
Q401, 402	T		\exists	603, 604		, , , , , , , , , , , , , , , , , , , ,
Q403, 404		Transistor, 2SC1815 NEW-GF Transistor, 2SK246-GR	1	605, 606		
405, 406		11 ansistor, 25K246-GR	İ	607, 608		
407, 408				609, 610		
Q409, 410		Transistor 2802240 CB		611		
Q411, 412		Transistor, 2SC2240-GR Transistor, 2SK246-GR		613, 615		
Q413, 414		IC, TA7629P	1.	D616		Diode, 1S1555V (TD)
Q415, 416		Transistor, 2SA1015-GR	$ \Delta$	D614		Diode, S5277B
Q417, 418				D620		Diode, TLG206, LED GRN
Q419, 420		Transistor, 2SC1959NEW-Y		D621	1	Diode, TLR206, LED RED
Q421, 422		Transistor, 2SK246-GR (TD)		D622		Diode, TLY206, LED YEL
Q421, 422 Q423		Transistor, 2SC1815 NEW-GR		D612		Diode, 05Z6.8X
Q423		IC, TA7639P				
Q425	1	IC, TA7666P	$ \Lambda $	D901	22115571	Diede, SIVB10
Q425		Transistor, 2SC1959NEW-GR		D902		Diode, 1S1553V
Q601		IC TC4040DD		D903, 904		Diode, 05Z12Z
Q602		IC, TC4049BP				
Q603		IC, TC5066BP				
Q604		Transistor, 2SC1815NEW-GR				
Q605, 606		Transistor, 2SA1015-GR				
Q607, 608		Transistor, 2SC1959NEW-Y				
Q609		Transistor, 2SA562TM-Y		C	OILS & TR	ANSFORMERS
Q610	İ	Transistor, 2SC2236-Y	\wedge	L1		
Q611		Transistor, 2SC1959NEW-Y	44	Commence of the Commence of th	22147228	Solenoid Coil, Play
Ω612		Transistor, 2SC1959NEW-Y		L401, 402	22232252	Coil, 8.2mH
Q613		IC, TC9143P		L601	22235201	Coil, Oscillator
2614		Transistor, 2SC1627A-Y	Δ	T901	22224002	_
4014		Transistor, 2SA1015-GR (TD)	. 8	T901	22224023	Transformer, Power (TE,TD)
Ω901		Transista : 2002400 V		T901	22224024	Transformer, Power (TU,AY
2902		Transistor, 2SC2120-Y	\triangle	AND THE RESIDENCE OF THE PARTY	22224025	Transformer, Power (VF)
2903		Transistor, 2SC2120-Y		T901	22224022	Transformer, Power (TA)
2505		Transistor, 2SA473-Y	Δ	T901	22224026	Transformer, Power (TC)
0401, 402		Diodo 181557V				20 marin (1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 1990 - 19
0403, 404		Diode, 1S1555V				
405,406		Diode, 1S1553V				
407, 408						
409,410			Γ	-	F. F. S. S. S.	
0411, 412	22115708	Dieda DOFFOZO 1 1 55 and			ELECTRIC	CAL PARTS
413, 414	22113706	Diode, BG5527S-1, LED GRN	Λ	S1	22195686	Switch, Push, Power
415, 416					No. of Contract of	(TE, TU, AY, TD, VF)
417, 418		1.	Λ	S1	22195811	Switch, Push, Power (TA, TC)
417, 418	2211E707	Diada AAFF070 1 : 55 5			22195727	Switch, Leaf, REC Sefety

SERVICE DATA FILE NO. 103-150 SUPPLEMENT-A

TOSHIBA STEREO CASSETTE DECK PC-G2,PC-G2T

This supplement sheet contains the following contents.

- (1) The transistors, Q409 and Q410 have been changed into FETs during production.
- (2) Only for TD, AY versions, PC-G2T (Toshiba brand) will be released as a new model. Those will employ FETs for Q409 and Q410 from the first production.
- (3) Modifications applied during production are listed. Please refer to the original SERVICE DATA, FILE No. 100 150 for other information.

G2: TE, TD, TU, AY, VF, TA, TC G2T: TE, TU, AY, TD, VF
